Database Systems

Final Project

Name: Omar Tubeileh 20200322

Name: Lara Otay 20200305

Name: Mohammad Mishal 20200162

Instructor: Dr. Amer Badarneh

Introduction

We will design a database for an airport system, we chose this topic because the airport has important records that have to be saved in an organized way and these records have relationships connecting them, so creating a database system will satisfy that.

Roles

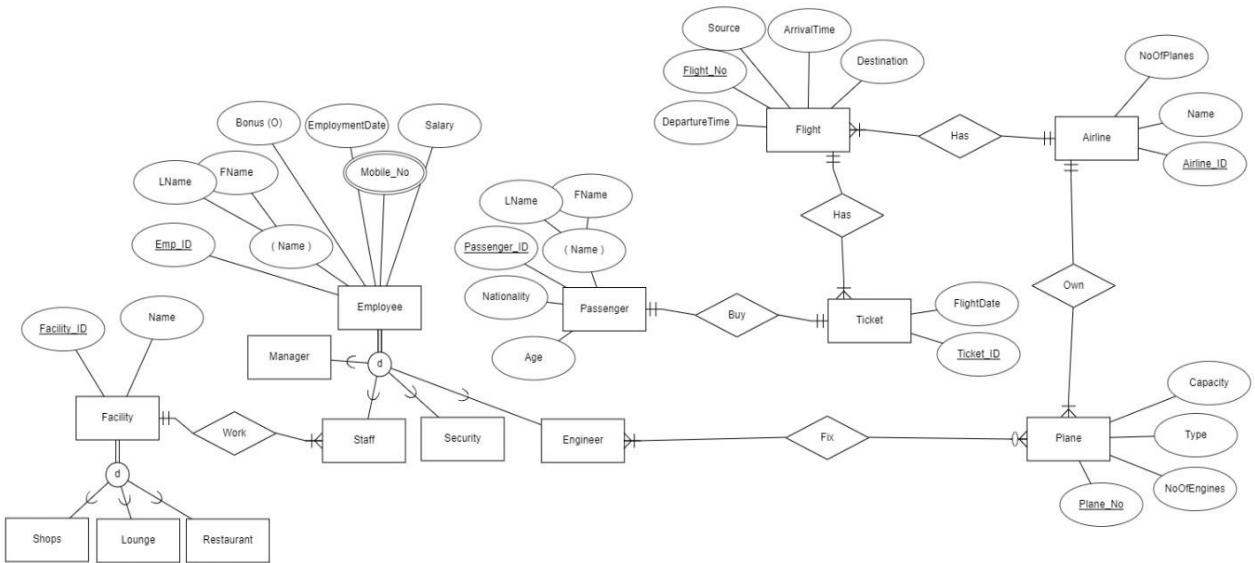

Omar will write the requirements and draw the EER diagram, Lara will convert the EER diagram to relations (mapping), and Mohammad will write the SQL code.

Requirements

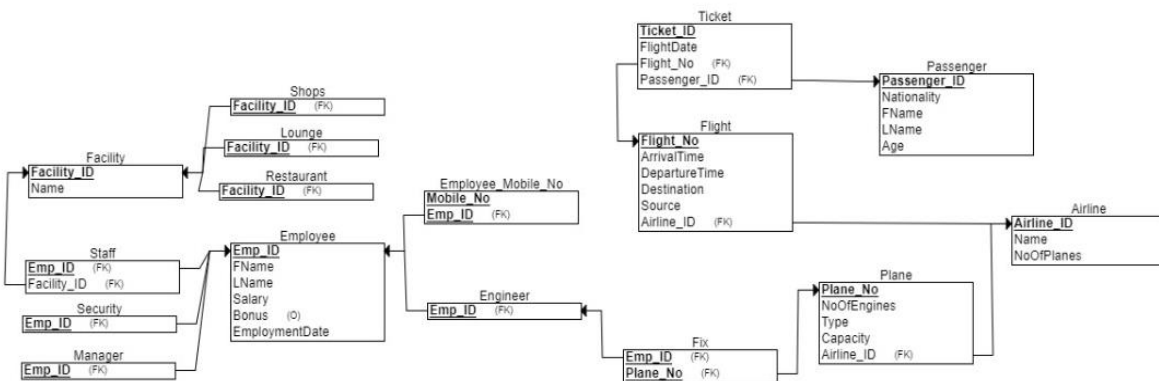

- An airport depends on a number of different types of persons for its successful operation. **People** within the airport are characterized by the following:
 - **National ID** (unique for each person), **Name** (composed of first and last name), **Mobile No**, and **Address**. (A person can have multiple phone numbers)
- A Person can be a **Passenger** or **Employee** or both
- Employees have a unique **Employee ID**, **Salary**, **Bonus** (can have no value), and **Start Date**. An Employee can be either **Manager**, **Security**, **Engineer**, or **Other Staff**.
 - A Staff member **works** in exactly one **Facility**, but a Facility should have at least one Staff member.
 - A Facility has unique **Facility ID** and **Name**.
 - A Facility can be **Shop**, **Lounge** or **Restaurant**.
- A Passenger has a **Passport Number**.
 - A Passenger **buys** one or many **Tickets**, but a Ticket is bought by exactly one passenger.
 - A Ticket is characterized by the following: **Seat Number** (unique for every Ticket), **Flight Number**, **Gate**, **Class**, **Flight Date**.
- An Engineer can **fix** zero or more **Planes**, and a plane can be fixed by one or many engineers.

- Every Plane has a unique **Plane Number**, **Capacity**, **Type**, and **Number of Engines**. Every Plane is **owned** by exactly one **Airline**, and each Airline owns one or many Planes.
 - Airlines have a unique **Airline_ID**, **Name**, **Number of Flights**, and **Number of Planes**.
- An Airline **has** at least one **Flight**, and a Flight is for exactly one Airline.
 - A Flight is identified by the following: a unique **Flight Number**, **Arrival Time**, **Departure Time**, **Destination** and **Source**

EER Model

Relational Schema

SQL Code:

```
create table employee (emp_id number(6) primary key, fName varchar(20), lName varchar(20), salary number(7), bonus number(6), EmploymentDate date);
```

```
create table facility (facility_id varchar(6) primary key, name varchar2(20));
```

```
create table staff (emp_id number(6) constraint emp_idFK references employee(emp_id), facility_id varchar(6) constraint facility_FK references facility(facility_id));
```

```
create table security (emp_id number(6) constraint emp_securityFK references employee(emp_id));
```

```
create table manager (emp_id number(6) constraint emp_managerFK references employee(emp_id));
```

```
create table shops (facility_id varchar(6) constraint facility_shopsFK references facility(facility_id));
```

```
create table lounge (facility_id varchar(6) constraint facility_loungeFK references facility(facility_id));
```

```
create table restaurant (facility_id varchar(6) constraint facility_restaurantFK references facility(facility_id));
```

```
create table Employee_Mobile_No (mobile_no number(13) primary key, emp_id number(6) constraint emp_mobileFK references employee(emp_id));
```

```
create table engineer (emp_id number(6) constraint emp_engineerFK references employee(emp_id));
```

```
create table airline (airline_id varchar2(6) primary key, name varchar2(20), NoOfPlanes number(6));
```

```
create table plane (plane_no number(7) primary key, NoOfEngines number(6), type varchar2(20), capacity number(7), airline_id varchar2(6) constraint airline_planeFK references airline(airline_id));
```

```
create table flight (flight_no varchar2(10) primary key, source varchar2(15), destination varchar2(15), airline_id varchar2(6) constraint airline_flightFK references airline(airline_id), DepartureTime varchar2(20), ArrivalTime varchar2(20));
```

```
create table passenger (passenger_id number(15) primary key, nationality varchar2(15), fName varchar2(15), lName varchar2(15), age number(6));
```

```
create table ticket (ticket_id number(15) primary key, flightDate date, flight_no varchar2(10) constraint flight_ticketFK references flight(flight_no), passenger_id number(15) constraint passenger_flightFK references passenger(passenger_id));
```

create table fix

(emp_id number(6) constraint fix_emp_engineerFK references employee(emp_id),
plane_no number(7) constraint fix_planeFK references plane(plane_no));

Tables

The screenshot shows the Oracle Apex Table Finder interface. At the top, there is a search bar and a dropdown menu for the schema, which is currently set to 'WKSP_DATABASEMKHT'. Below this, a table lists the tables in the schema. The table has four columns: 'Table Name', 'Rows', 'Last Analyzed', and 'Type'. The 'Rows' column is currently empty for all tables. The 'Last Analyzed' column shows a date of '1/11/2023' for all tables. The 'Type' column shows 'TABLE' for all tables. The table lists 17 tables: AIRLINE, EMPLOYEE, EMPLOYEE_MOBILE_NO, ENGINEER, FACILITY, FIX, FLIGHT, HTMLDB_PLAN_TABLE, LOUNGE, MANAGER, PASSENGER, PLANE, RESTAURANT, SECURITY, SHOPS, STAFF, and TICKET. The bottom of the screen shows the Windows taskbar with the date and time '10:17 PM 1/11/2023'.

Bonus:

Checks for ID when logging in, if ID does not exist, an error occurs

The left screenshot shows the 'Airport' application window with the title 'Please Select your Role:'. It has three columns for 'Airline', 'Manager', and 'Passenger'. The 'Manager' column has 'Enter Your ID:' with '1' entered and the 'Submit' button highlighted. The status bar at the bottom says 'Connected'.

The right screenshot shows the same window, but the 'Passenger' column has 'Enter Your ID:' with '200' entered and the 'Submit' button highlighted. A red circle highlights the error message 'cannot log in, ID does not exist' at the bottom of the window.

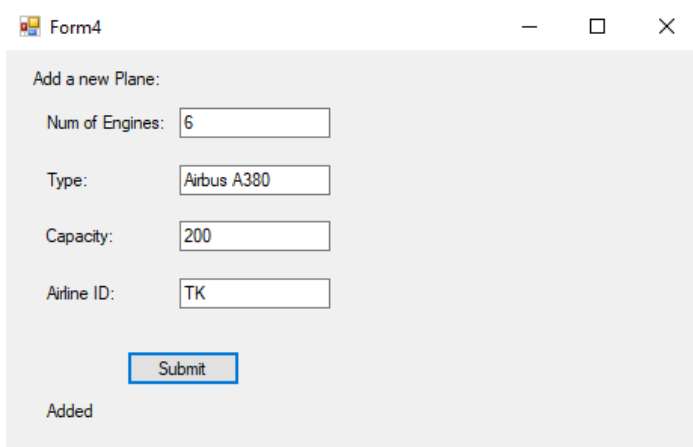

Here there is no
passenger with ID 200

	passenger_id	nationality	fName	lName	age
	Filter	Filter	Filter	Filter	Filter
1	1	Jordanian	Fathi	Shedefat	24
2	2	Turkish	Emir	Yilmaz	60
3	3	Iraqi	Ameer	Dulaimy	20
4	4	Jordanian	Mohammad	Asaf	41
5	5	Palestinian	Sameh	Tafesh	35

For the manager, he/she can add a new employee:

The 'Employee' application window has a title bar with 'Employee' and standard window controls. The main content area is titled 'Inserted' and 'Add a new Employee:'. It contains several input fields: 'First Name:' with 'Lara', 'Last Name:' with 'Otay', 'Salary:' with '1000', 'Bonus:' with '10', and 'Employment Date:' with '01/01/2021'. A 'Submit' button is at the bottom.

For an Airline, a new plane can be added:
